

METHOD OF ESTABLISHING ACCESS FROM A TERMINAL TO A SERVERABSTRACT

5

The present invention relates to a method of establishing access from a terminal 5,105 to a server 20,120, which is in non-permanent connection to the server 20,120. Authentication procedures after establishing of the connection delay access to the requested server. The method according to the invention allows request of the particular server before or parallel with the authentication process.
